

Installation

All Operating Systems

1. Install Java 11+, e.g. [OpenJDK 11](#).
 - You can check the Java version you have installed by running `java -version` in Terminal (Linux / macOS) or Command Prompt (Windows). See [How to Check if Java is Installed](#).
2. Install [Miniconda](#) with Python version 3.x.
 - **[Windows]** During installation, enable the "Add Anaconda to my PATH environment variable" option. See [Install Python on Windows](#)

- You can check the Conda version you have installed by running `conda --version` in Terminal (Linux / macOS) or Command Prompt (Windows). See [Managing conda](#).

Linux

1. Run the included `install.sh` script. See [How to run .sh in Linux](#).
 - Open a Terminal window (Ctrl+Alt+T).
 - Run `cd <install-directory>`, replacing `<install-directory>` with the complete path to the

installation directory.

- Run `chmod +x ./install.sh`.
- Run `./install.sh`.

2. Start JupyterLab

- Run `cd <notebook-directory>`, replacing `<notebook-directory>` with the complete path to the root directory for your notebooks.
- Run `jupyter lab`.
- JupyterLab will start in a browser window.

macOS

1. Run the included `install.sh` script.

- Open a Terminal window. See [How to Open a Terminal Window in Mac](#).
- Run `cd <install-directory>`, replacing `<install-directory>` with the complete path to the installation directory.
- Run `chmod +x ./install.sh`. See [Make a file executable in Terminal on Mac](#).
- Run `./install.sh`.

2. Start JupyterLab

- Run `cd <notebook-directory>`, replacing `<notebook-directory>` with the complete path to the root directory for your notebooks.
- Run `jupyter lab`.
- JupyterLab will start in a browser window.

Windows

1. Run the included `install.bat` script.

- Double click `install.bat` from File Explorer. See [How to run a batch file on Windows 10](#).
- Alternatively use Run or Command Prompt. See [How to Run a Batch File from the Command Line on Windows](#).

2. Start JupyterLab

- Open Command Prompt.
- Run `cd <notebook-directory>`, replacing `<notebook-directory>` with the complete path to the root directory for your notebooks.
- Run `jupyter lab`.
- JupyterLab will start in a browser window.
